Creating a Free Zmodo DNS Account for Use with Zmodo DVRs

Zmodo is proud to introduce our new dynamic DNS service, which will allow our customers to automatically update their public IP addresses with our server and connect remotely to their devices through a friendly, easy to use interface. Getting everything set up is straightforward and should only take a few minutes.

Step 1. Download the Windows Client from zmododns.com

The screenshot shows the Zmodo DDNS website interface. At the top, there is a blue header with the Zmodo logo and the text "DDNS". To the right of the logo are three links: "Sign In", "Sign Out", and "New User?". Below the header is a light blue banner that says "Welcome to Zmodo Dynamic DNS".

On the left side, there is a text block that reads: "To use our DDNS system all you need to do is create an account here, enter your login information into your ZMODE NVR with an internet connection and check the web site for a link straight to your NVR!".

Below this text is a section titled "NEW FEATURE!" in blue. It contains the following text: "Download the new ZMODODNS standalone application for Windows! You can now update your external IP address automatically from your Windows PC! Un-zip the folder anywhere and click on 'Zmododns.exe'. Login to your Zmodo DNS account from there."

At the bottom of this section is a red button with the text "DOWNLOAD Application".

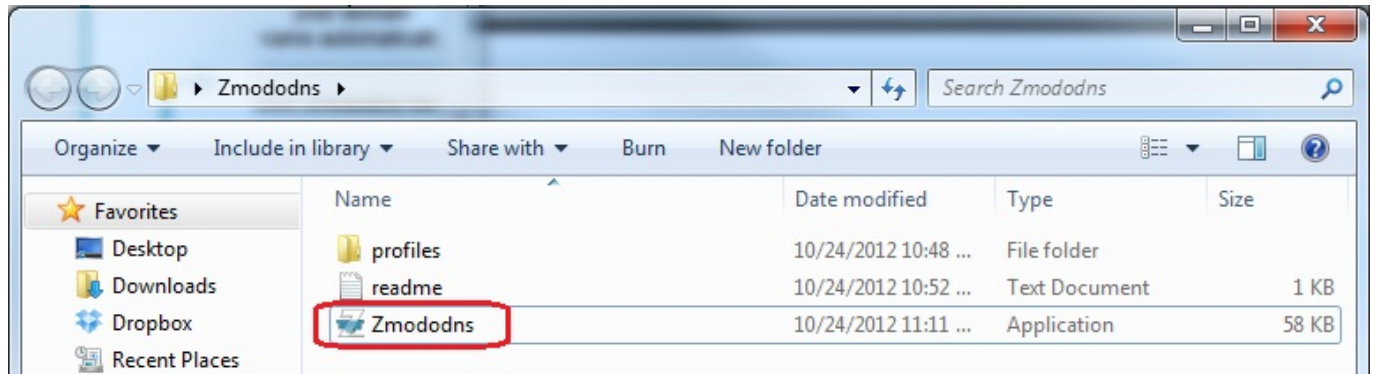

On the right side, there is a diagram illustrating the process. It shows a central box with the text "Zmodo DNS server updates your domain name automatically" and "xxxx.zmododns.com". Two arrows point from this box to two separate boxes below it. The left box says "Login to your Zmodo DNS account on your NVR or through a Windows PC" and includes an icon of a Zmodo NVR. The right box says "Check your NVR from any Internet Explorer Browser" and includes an icon of a computer monitor.

At the bottom of the right side, there is a blue banner that says "Purchase Zmodo products here!" and a black banner with the text "CCTVHotDeals" in white and yellow.

DVR Systems

Extract the download using 7Zip.

Open the extracted folder, then open the program called Zmododns.

Step 2. Sign up for an account at zmododns.com

[Sign In](#) [Sign Out](#) [New User?](#)

Create an Account

CREATE ACCOUNT

Enter a Username

Password must be at Least 5 characters

Email is necessary if you need to reset your password

Step 3. Create domain name(s) for use with your device(s)

DVR Systems

Once signed in, you will need to add a domain. This will be the address used to access your device. Each account can request up to 5 domains for use with multiple devices at different IP addresses. Click on "Add Domain"

Hi, Demo

These are your registered domain names with their current IP.(Max 5)

Unassigned D	Unassigned D	Unassigned D	Unassigned D	Unassigned D

ADD DOMAIN

DELETE DOMAIN

New Zmodo DNS Functionality!
You may now type in your Zmododns name into any browser from any PC and access your Zmodo product!

 newuser.zmododns.com|

Enter the desired domain name into the blank and hit submit. If the name is available, the user will be informed of a successful domain creation. Otherwise, the user will need to choose a different name.

Add Domain

Enter your desired domain address.

ADD DOMAIN

RETURN HOME

Enter your desired domain name here

If available, your domain will show up in this layout: mydvr.zmododns.com

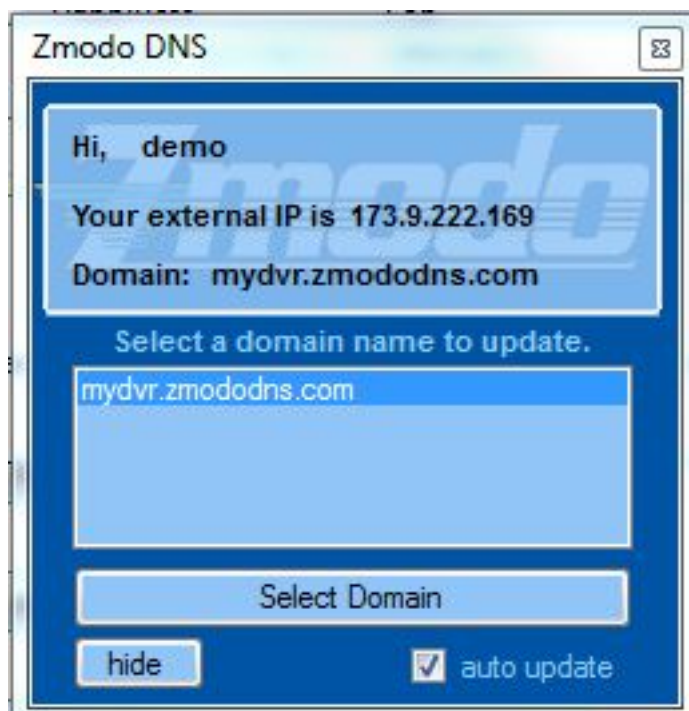

Step 4. Login to your account on the Zmododns Windows Client that you downloaded.

DVR Systems

A screenshot of the Zmodo DNS login window. The window has a title bar that says "Zmodo DNS" and a close button. The main area has a blue background with the Zmodo logo at the top. Below the logo, there are labels for "Username" and "Password". The username field contains the text "demo". To the right of the username field is a checkbox labeled "save user". The password field contains a series of asterisks. Below the password field are two links: "Forgot password?" and "Need an account?". At the bottom is a "Login" button.

Once logged in, check the "auto update" check-box to enable the software to automatically update your IP address every two hours.

A screenshot of the Zmodo DNS window after login. The window has a title bar that says "Zmodo DNS" and a close button. The main area has a blue background with the Zmodo logo. Below the logo, it says "Hi, demo". Then it says "Your external IP is 173.9.222.169" and "Domain: mydvr.zmododns.com". Below this is a section titled "Select a domain name to update." with a list box containing "mydvr.zmododns.com". Below the list box is a "Select Domain" button. At the bottom left is a "hide" button, and at the bottom right is a checked checkbox labeled "auto update".

DVR Systems

The Zmododns Windows Client software must be running at all times on a PC that is connected to the same router that your DVR is connected to. There is a "Hide" function on the software if you'd prefer to minimize the software to your bottom right Notification Area.
