## DVR-H9108V / DVR-H9108UV Remote Network Setup

Once you have completed the <u>Local Network Setup</u>, you should have an internal IP address for your DVR.

The next step in the process is to forward ports pertaining to the DVR, so that you can see your cameras remotely.

We recommend that you follow the steps in our network tutorial located at <u>www.zmodo.com/network</u>. This video walks through using our network tutorial:

#### Forward DVR's Ports

1) Log in to your router by entering the gateway IP, such as 192.168.1.1, in to your browser window. Enter the login information for your router. If you cannot remember this, you can check the default username/password combinations for most routers at <a href="http://www.pcwintech.com/default-router-modem-passwords">http://www.pcwintech.com/default-router-modem-passwords</a>. If you are unable to locate this information, please contact your router manufacturer or Internet Service Provider.

2) Once you've logged in to your router, you will need to enter the Port Forwarding section of your router. There, you'll enter the IP address, protocols, and port numbers for your DVR.

**IP Address** = IP address in your DVR's Network Settings

**Protocol** = BOTH (TCP/UDP) OR TCP

**Service or Application Name** can be anything you wish, like DVR1 or DVR2

URL: https://kb.zmodo.com/index.php?action=artikel&cat=10&id=4&artlang=en

Create 1 rule per port number; Start and End Ports will be the same number

Here are the default ports for Zmodo units (last port # is the mobile port):

H9104, H9108, H9106, H9116: 80, 9000, 18004

**H9114, H9118**: 80, 5050, 6050, 7050

H9124, H9128, DR-SFN6: 80, 9000, 15961

H8000/H8100 series: 80, 7777, 8888

**Note**: If you are using a DSL internet service, you may need to use port 81 (instead of 80) as your web port. If so, be sure to change this in your DVR's network settings, and restart the unit. Once the port number is changed, you will need to use it when connecting to the unit (ie. <u>http://192.168.1.1</u> becomes <u>http://192.168.1.140:81</u>)

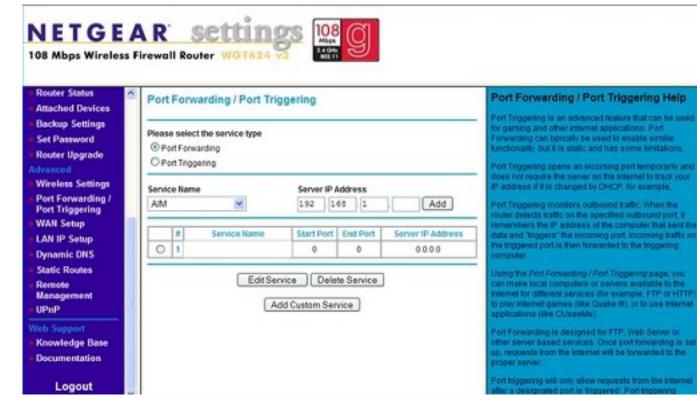

3)Below are screenshot samples of common router's Port Forwarding sections. Please note that exact locations may differ depending on your router's model. If your model is not listed, try looking through Advanced, Firewall, or Forwarding sections in your router to find the exact location.

#### Linksys

Applications & Gaming						Win	eless G Broad	Iband Router	WRITSHEL
	Setup	Wire	<b>1</b> 155	Secur		Lccoss drictions	Applications & Gerning	Administration	Status

		Ú	10	0	Both M	152.168.10.0			
		(A	-	EA .		1000			

In Linksys routers, you will typically enter Applications & Gaming, then Port Range Forward. Exact names/places will differ depending on model. Be sure to create forward 1 port range per line, and check the 'Enable' box at the end of the line, then save changes.

Netgear

In Netgear routers, you will typically look under Advanced for Port Forwarding/Triggering. Select Port Forwarding as your service type. Then, select 'Add Custom Service' for each port you forward.

**D-Link**

For Belkin routers, access port fowarding under Firewall, Virtual Servers. Be sure to check the 'Enable' box, then hit the 'Set' button, and save your changes.

#### 2-Wire

For 2-Wire modems, enter Firewall, then Advanced Settings.

Edit	firewall settings for this computer:	
0	Maximum protection - Disallow unsolicity	ed inbound traffic.
	Allow individual application(s) - Choose t Click ADD to add it to the Hosted Application	the application(s) that will be enabled to pass through the firewall to this compute ons list.
[	All applications	Hosted Applications:
	Age of Empires Age of Kings Age of Wonders Aliens vs Predator Anarchy Online Asheron's Call Baldur's Gate BattleCom Battlefield Communicator Black and White	

First, look for the DVR's IP address under (1) Select a computer. If you do not see the DVR's IP address here, you may need to go in to the DVR's Network Settings, and set the DVR to DHCP (instead of Static), then reboot the DVR. Once the unit reboots, check it's IP address in the Network Settings, then go back to your router to select the DVR from the list.

Next, you will need to click on "Add a new user-defined application", to come to the this new screen:

Profile Name			
Enter a name for the	application pro	ofile that you are creati	ng.
Application Name:			
Definition			
	multiple ports	on to the Definition Lis or both TCP and UDP	
changes in addition to	simple port forwa	oplication types require a arding. If the application y dow, it is recommended th	ou are adding
Protocol:	@ TCP	OUDP	
Port (or Range):	From:	To:	
Protocol Timeout (seconds):		TCP default 8640 UDP default 600	0
Map to Host Port		above.	e port as defined
	None (Def	ault)	
Application Type:			

Create your rule, and click 'Add Definition'. Create a rule for each port. Then, click Back.

Edit firewall setting	s for this compu	ter:		
Maximum prote	ection - Disallow	unsolicited i	nbound traffic.	
	application(s) - d it to the Hosted			abled to pass through the firewall to this comput
All applicat	ions	~	Hosted Applications:	
Age of Empire Age of Kings Age of Wonde Aliens vs Pred Anarchy Onlin Asheron's Call Baldur's Gate BattleCom Battlefield Cor	rs ator e	Add Remove		

When done, select each application you have created, and click 'Add', so that you see the desired applications in the Hosted Applications table. When finished, click 'Done' at the bottom of the screen.

#### Netopia

For Netopia routers, click on the Configure tab at the top of the page.

				Sub	omit			
						-		

Create your rule, then hit 'Submit', and repeat for each port. When you have completed, click on the yellow triangle with an '!' inside (located at the top righthand corner) to save your changes.

#### **Checking Your Connection**

4) Once you have forwarded all ports necessary for your DVR, you'll want to check and make sure each of these ports was successfully opened. To check this, go to <u>http://www.yougetsignal.com/tools/open-ports/</u>

Here, you will see fields for **Remote Address** and **Port Number**.

To check that your ports are open, enter each port you've forwarded (one at a time) in to the Port Number field, and click 'Check'.

If you see a green flag, and a statement "Port X is open on XXX.XXX.XXX.XXX", you have fowarded your ports correctly. You are now able to view your DVR remotely.

If you see a red flag, the port is not open. Go back in to your router, and double check at all information is correct. In some cases, a port may be blocked by your ISP. To find out why, or to request it opened, please contact your ISP.

**Important**: The Remote Address that you see is **your DVR's external IP address**. This is the address that you will use to access your DVR from a different computer. Write this down!! And remember, ActiveX settings must be changed on each new computer that you are viewing from before you'll be able to bring your DVR up.
