

Zsight

Zsight Update Published May 27, 2014

This new update has several major changes.

1. Zsight now requires the user to create an account and login. Each device ID can only be assigned to one user account.

The image shows a mobile app sign-up screen. At the top is a dark grey header with a white back arrow on the left and the text 'Sign Up' in the center. Below the header is a light grey rectangular area containing the following elements: a label 'Email' followed by a text input field; a light grey box with the text 'This will be your Email'; a label 'Password' followed by a text input field; a label 'Confirm password' followed by a text input field; a light grey box containing the text 'Password need to be 6~20 characters'; and a blue button with the text 'Sign Up'.

2. You will also need to rescan the QR code on your camera to add it to the app. You must now be at the location of the camera to add the device to your Zsight application.

Tap the **[+]** icon in the upper right-hand corner.

Tap **Scan QR Code** from the list that appears. (The EZ Link is for future products.)

Zsight

Scan the QR code on your camera or NVR.

Scan QR Code

Aim camera at QR code, It will scan automatically.

Important: If you update the application, you will need to re-add your cameras. You must be at the location of the camera to re-add it.

Also, the new app has a remote control feature that you can use when your phone is on the same Wi-Fi as the NVR.
