

NVR and IP Cameras

What is the wireless range of the IP Cameras that come included with the NVR kit?

The wireless range of the IP Cameras is dependent on the strength of the wireless signal that is emitted from the router that is connected to the NVR and to the cameras.

Before purchasing the NVR kit, it is recommended to take a WiFi device (such as a laptop or a cellphone), and hold that WiFi device in the approximate area where you plan on installing a camera. If the WiFi device receives a strong WiFi signal from your router, then the IP Camera will also receive a strong signal.

Please perform this test for each area where you intend to install your IP Cameras.
