Remote Network Setup

Once you have completed the <u>Local Network Setup</u>, you should have an internal IP address for your DVR.

The next step in the process is to forward ports pertaining to the DVR, so that you can see your cameras remotely.

We recommend that you follow the steps in our network tutorial located at <u>www.zmodo.com/network</u>. This video walks through using our network tutorial:

Forward DVR's Ports

1) Log in to your router by entering the gateway IP, such as 192.168.1.1, in to your browser window. Enter the login information for your router. If you cannot remember this, you can check the default username/password combinations for most routers at http://www.pcwintech.com/default-router-modem-passwords. If you are unable to locate this information, please contact your router manufacturer or Internet Service Provider.

2) Once you've logged in to your router, you will need to enter the Port Forwarding section of your router. There, you'll enter the IP address, protocols, and port numbers for your DVR.

IP Address = IP address in your DVR's Network Settings

Protocol = BOTH (TCP/UDP) OR TCP

Service or Application Name can be anything you wish, like DVR1 or DVR2

Page 1 / 12

(c) 2024 Jeremy Schultz <itmanager@eptco.com> | 2024-04-25 15:21 URL: https://kb.zmodo.com/index.php?action=artikel&cat=6&id=4&artlang=en

Create 1 rule per port number; Start and End Ports will be the same number

Here are the default ports for Zmodo units (last port # is the mobile port):

H9104, H9108, H9106, H9116: 80, 9000, 18004

H9114, H9118: 80, 5050, 6050, 7050

H9124, H9128, DR-SFN6: 80, 9000, 15961

H8000/H8100 series: 80, 7777, 8888

Note: If you are using a DSL internet service, you may need to use port 81 (instead of 80) as your web port. If so, be sure to change this in your DVR's network settings, and restart the unit. Once the port number is changed, you will need to use it when connecting to the unit (ie. <u>http://192.168.1.1</u> becomes <u>http://192.168.1.140:81</u>)

3)Below are screenshot samples of common router's Port Forwarding sections. Please note that exact locations may differ depending on your router's model. If your model is not listed, try looking through Advanced, Firewall, or Forwarding sections in your router to find the exact location.

		A	-	-			_					

In Linksys routers, you will typically enter Applications & Gaming, then Port Range Forward. Exact names/places will differ depending on model. Be sure to create forward 1 port range per line, and check the 'Enable' box at the end of the line, then save changes.

Netgear

Router Status Attached Devices Backup Settings Set Password Router Upgrade Advanced	Port Forwarding / Port Trig Please select the service type © Port Forwarding ○ Port Triggering	ggering	Port Forwarding / Port Triggering Help Port Triggering is an advanced feature that can be used for gaming and other internet applications. Port Forwarding can typically be used to enable similar functionality, but it is static and has some limitations. Port Triggering opens an incoming port temporarily and
Wireless Settings Port Forwarding / Port Triggering WAN Setup LAN IP Setup Dynamic DNS	Service Name AIM	Server IP Address 192.148.1 Add Start Port End Port Server IP Address 0 0 0 0000	does not require the server on the internet to track your IP address if it is changed by DHCP, for example. Port Triggering monitors outbound traffic. When the nouter detects traffic on the specified outbound port, it remembers the IP address of the computer that sent the data and "triggers" the incoming port, incoming traffic on the triggered port is then forwarded to the triggering computer.
Static Routes Remote Management UPnP Web Support	EditSer	vice Delete Service	Using the Port Forwarding / Port Triggering page, you can make local computers or servers available to the Internet for different senices (for example, FTP or HTTP), to play internet games (like Quake III), or to use internet applications (like QuaeMe).
Knowledge Base Documentation Logout			Port Forwarding is designed for FTP, Web Server or other server based senicors. Once port forwarding is set up, requests from the Internet will be forwarded to the proper server. Port higgering will only allow requests from the Internet after a designated port is triggered. Port higgering

In Netgear routers, you will typically look under Advanced for Port Forwarding/Triggering. Select Port Forwarding as your service type. Then, select 'Add Custom Service' for each port you forward.

utilities		-					

For Belkin routers, access port fowarding under Firewall, Virtual Servers. Be sure to check the 'Enable' box, then hit the 'Set' button, and save your changes.

2-Wire

For 2-Wire modems, enter Firewall, then Advanced Settings.

ZMD-DD-SAN8

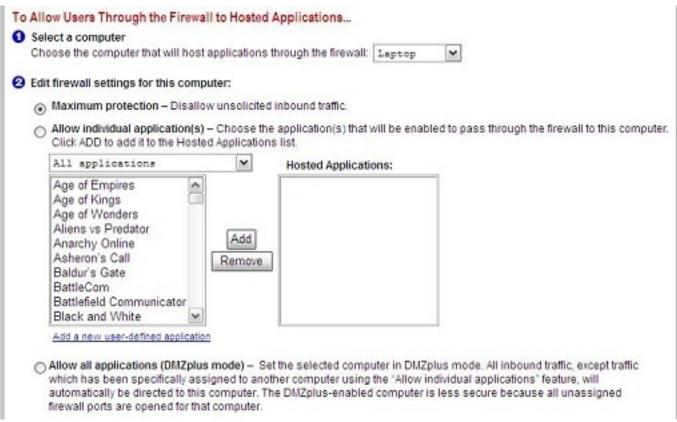

First, look for the DVR's IP address under (1) Select a computer. If you do not see the DVR's IP address here, you may need to go in to the DVR's Network Settings, and set the DVR to DHCP (instead of Static), then reboot the DVR. Once the unit reboots, check it's IP address in the Network Settings, then go back to your router to select the DVR from the list.

Next, you will need to click on "Add a new user-defined application", to come to the this new screen:

Settings						
Profile Name						
Enter a name for th	e applicatio	on profile	that yo	u are creati	ng.	
Application Name:		0.0400.010				
Definition						
Choose a protocol ADD DEFINITION to application requires need to add multipl	add the d multiple p	efinition ports or b	to the D	efinition Lis	t If the	
Note: In some rare in changes in addition to appears in the applica	simple port	forwardin	ig. If the	application y	ou are adding	2
Protocol:	@ TCF		C	UDP

Map to Host Port			Defa abov		e port as def	ined
Application Type:	None	(Defeul	.t)			•
	ADD DEF	FINITION				
						BACK

Create your rule, and click 'Add Definition'. Create a rule for each port. Then, click Back.

When done, select each application you have created, and click 'Add', so that you see the desired applications in the Hosted Applications table. When finished, click 'Done' at the bottom of the screen.

Netopia

For Netopia routers, click on the Configure tab at the top of the page.

Home	Configure Troubles	hoot Security Install	Restart	Help					
netopia.	Home - Configure								
<u>Quickstart</u> LAN WAN Advanced	 To make configuration changes, follow these steps: Make a change to a field or parameter. Click Submit. This change isn't permanent; you'll save it later. The Alert button (top right corner) appears. Make more changes, if desired. Click the Alert button. The Save Changes page appears. If your changes are validated, you can save them. If not, a descriptive message appears. Choose Save and Restart. The Gateway restarts with your changes.

				Sub	omit			
						-		

Create your rule, then hit 'Submit', and repeat for each port. When you have completed, click on the yellow triangle with an '!' inside (located at the top righthand corner) to save your changes.

Checking Your Connection

4) Once you have forwarded all ports necessary for your DVR, you'll want to check and make sure each of these ports was successfully opened. To check this, go to <u>http://www.yougetsignal.com/tools/open-ports/</u>

Here, you will see fields for **Remote Address** and **Port Number**.

To check that your ports are open, enter each port you've forwarded (one at a time) in to the Port Number field, and click 'Check'.

If you see a green flag, and a statement "Port X is open on XXX.XXX.XXX.XXX", you have fowarded your ports correctly. You are now able to view your DVR remotely.

If you see a red flag, the port is not open. Go back in to your router, and double check at all information is correct. In some cases, a port may be blocked by your ISP. To find out why, or to request it opened, please contact your ISP.

Important: The Remote Address that you see is **your DVR's external IP address**. This is the address that you will use to access your DVR from a different computer. Write this down!! And remember, ActiveX settings must be changed on each new computer that you are viewing from before you'll be able to bring your DVR up.
